OVERVIEW

This ASSA ABLOY ACCENTRA retrofit trim goes on the inside of the Loo's front door. The user turns the thumb turn to lock the door, and the window switches from green Unlocked to red Locked, so they know for certain the door is secure.

It retrofits existing Best or Schlage sectional mortise locks and pairs with the exterior indicator (BE190 626 10), so the status shows on both sides of the door. The part pictured is BE194 626 V10.

01 PEACE OF MIND INSIDE

A large window right above the thumb turn confirms the door is locked, so users aren't left wondering.

03 VISIBLE IN LOW LIGHT

A reflective coating on the indicator panel keeps the status clear in dim interiors and at night.

02 PATENTED CURVED WINDOW

The status window is 25% larger than competing indicators and readable across a 180° viewing angle.

04 RETROFITS EXISTING LOCKS

Fits a variety of Best and Schlage mortise lock functions and doesn't void the UL listing when installed correctly.

PAIR IT UP

Order with the exterior indicator so people outside see the same status. Together they cut down on door rattling and knocking, and help maintenance crews see at a glance if the Loo is in use.

				V44	Unlocked/Locked	Unlocked/Locked	  White/Red
				V54	Vacant/Occupied	Unlocked/Locked	  White/Red
				V66	Icons only	Icons only	  White/Red

Codes set the wording, color and side of the door. Outside-only codes (V10–V60) are on the exterior indicator sheet. More options on request.

VIEWS

UNLOCKED

Green: the door is open to the next user.

LOCKED

Red: the user inside has locked the door.

EXTERIOR + INTERIOR

The pair shows status on both sides.

ORDERING TIP

Give the option code with the part number. Inside-only codes (V01–V06) show status on the inside of the door; double codes such as V11 show it on both sides.
